## RESEARCH AND TECHNICAL SUPPORT POSITION

### Job Description:

This position will be responsible for performing general laboratory duties to support product line, as well as, related research work, including, but not limited to dilution plating, titratable acidity, pH measurement, milk fermentation and neutralizations, gram stains, microscope skills, and the various tasks mentioned below. The candidate will cross-train and provide laboratory and technical support assistance to group members in research projects.

In addition, the candidate may:

- Be involved in formulations development and maintenance, inventory rotations, and providing field service to customers.
- Be expected to assist in the design of experiments, conduct those experiments independently and collect, summarize and present the resulting data as well as to troubleshoot problems as they arise.
- Be involved in the isolation, curation, and archival activities involving the company strain bank.
- Have routine interactions with customers.

### Experience:

- Competent in microbial techniques, aseptic technique, and good data interpretation skills.
- Must demonstrate strong problem solving aptitude and ability to take responsibility for all aspects of job assignments.
- Communicate effectively, team player, report results in a conscientious manner.
- Experience with working under pressure and managing multiple tasks simultaneously.
- Well organized and methodical, yet flexible to changing priorities.
- Proven track record of self motivation and initiative, excellent verbal and written communication skills.

### Qualifications/Education:

Bachelors Degree preferred, Associates Degree in science related field plus one year experience (preferably Biology, Microbiology or Food Science)
